

I think sub-banding the proposed 5000kHz amateur band would be the best course of action. For example, 5250-5300kHz should be reserved for narrow-band modes such as CW and data. General class and higher class licensees should have access to the band. I am not opposed to limiting power output to less than 1500 watts (such as limiting to 200 watts PEP) to reduce interference potential.
